- PENDANTS: one
- MOUNTING: shallow brushed nickel canopy 116mm (4.5") in diameter x 7mm (0.3") deep
- LAMPING: 1.5w LED or 10w xenon
- COAX: adjustable 3000mm (10') standard / up to 30500mm (100') maximum
- MATERIALS: blown glass, braided metal coaxial cable, electrical components, brushed nickel canopy
- WEIGHT: approximately 2.7kg (6lb)
- POWER SUPPLIES: integral (power supply housed within junction box). Power supplies included

DESCRIPTION

The 38.1V is a single 38V pendant fixture with a shallow brushed nickel canopy designed to fit over a new or existing 4" octagonal junction box. The canopy is 116mm (4.5") in diameter and 7mm (0.3") deep, which creates a subtle profile that minimizes the impact in the application surface. The pendant drop lengths on this light fixture are adjustable up to the specified maximum.

38V is a variant of the original 38 series where a large glass sphere is blown with a multitude of haphazard interior cavities, which intersect and collide in unpredictable ways. 38V is smaller, lighter and suspended with coaxial cables. The interior cavities can be filled with plants or left empty.

Standard 38V are made with clear glass exterior spheres and milk white interior lamp holder cavities.

NOTES

- + Purchase replacement lamps online at www.bocci.com/shop/bulbs
- + Unless otherwise noted when ordering, all fixtures will be outfitted to be xenon compatible

BOCCI

1

Very carefully uncoil the braided coaxial cable in a spool like manner. Insert your index fingers into opposite sides of the roll then rotate your fingers around each other to unroll the coaxial cable.

Use patience: allow the cable to uncoil completely to avoid kinks.

2

Determine the overall drop for the pendant fixture.

3

Thread the coaxial cable through the canopy, use a 2mm Allen key to loosen the setscrew in the canopy and gently feed the cable through until you have reached your desired drop length.

Use Allen key to tighten the setscrew to hold the strain relief and secure the coaxial cable at its new length. Perform a gentle tug test to ensure it is secure.

DO NOT OVERTIGHTEN.

Note: The strain relief is a black plastic collar around the coaxial cable. There is a single slot opening on the side of the strain relief component. It is essential that this opening is oriented at 90 degrees to set screw chamber. There can be no contact between the set screw and the cable.

RISK OF ELECTRIC SHORT!

4

Xenon (110V) or LED: connect the black wire to black and white wire to white wire.

Xenon (230V): connect black wire to brown wire and white wire to blue wire.

Connect the coaxial cable to the open slots in the terminal block on the 12V side of the power supplies.

For multiple pendant installations, ensure that the braided outer wires are all connected to one 12V output wire and all inner insulated wires are connected to the other or a short will occur.

Once all coaxial connections are made, lift the fixture into position and connect the line voltage to the open slot in the appropriate terminal block.

5

The client is responsible to ensure fasteners are attached to a robust structural substrate.

Tuck the power supply and wiring into the octagonal box, if available, and place canopy over top, lining up the fastener holes or connecting directly to structural ceiling surface. Affix canopy with fasteners provided.

Turn power to fixture on.

6

Bocci lamps are included. Carefully plug the lamp into the socket. Ensure power to lamp is working correctly.

Remove the center cap from 38V pendant. Install 38V pendant by sliding the center cap onto the coaxial cable, gently insert the lamp into the pendant, then tighten the center cap connection by hand.

DO NOT OVERTIGHTEN.

Remove the protective film from the center cap after assembly.

Note: when using a dimmer use only low voltage electronic dimmer.

7

Clean fingerprints from surfaces.
