

HANGMAN - Table

Rakumba

CODE - RP-E-2105

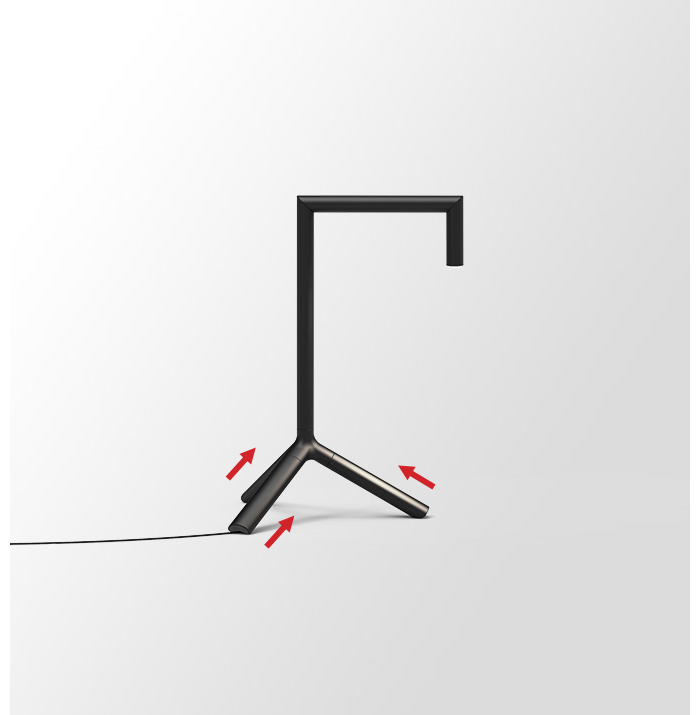

REVISION 23.10.23

REVISED BY: JC

- ① Hangman table is packaged with the three legs separated for shipping.

- ② The 3 legs will be attached as pictured.

- ③ Each leg has a silver lock mechanism pre-installed as shown. A protruding grub screw retains the lock in place during shipping.

- ④ Align each leg with the corresponding tripod section. The tab on the tripod, and the lock on the leg should oppose each other. Push each leg fully over the tab.

- ⑤ Tighten the grub screw firmly with an M2 allen key (supplied)

- ⑥ Repeat for all three legs.

- ⑦ After assembly, use the supplied glove or a microfibre cloth to remove any fingerprints, marks or polishing residue.

NOTES

DIMMING (Inline Switch Controls)

Single brief press -> On/Off

Press and hold -> Dim Up/Down

Long press when off -> On at minimum output

SWIVEL

The mechanism is designed to rotate 270 degrees, not a full circle – there is a rotation limiting device to prevent internal cables being damaged. Never force the swivel to over-rotate past this point.
